EDUCATION

University of British Columbia

Bachelor of Science, Major: Computer Science

Vancouver, BC

Graduation April 2029

- GPA: **4.30/4.33** - Relevant Coursework: Computation, Programs, and Programming — Software Construction — Introduction to Data Science — Introduction to Computer Systems — Algorithms and Data Structures

EXPERIENCE

Software Engineering Intern

Oct 2025 – Apr 2026

yAI

Remote

- Built production full-stack features using **TypeScript**, **React**, and **FastAPI** for an AI-powered financial analysis and due diligence platform, including chat interfaces, workflow automation, and citation systems.
- Improved **RAG** retrieval accuracy by **68%** by evaluating and implementing numerous chunking and search strategies using benchmark datasets and evaluation frameworks including FinanceBench.
- Designed and implemented an internal admin-facing analytics dashboard using **Azure Application Insights**, **PostgreSQL**, and **React**, tracking **50+** user events with enriched metadata across multiple client deployments.
- Developed and maintained **2,000+ automated tests** spanning backend (**pytest**), frontend (**Vitest**), end-to-end (**Playwright**), and load testing to improve CI/CD reliability.

PROJECTS

SimplySkin – Mobile Skincare App | *React Native, Expo, Supabase, Express.js*

Apr – Aug 2025

- Shipped a mobile skincare app, allowing users to upload face images and scan product barcodes to receive personalized ratings, reaching **100+** users in the first month.
- Engineered a two-stage computer vision pipeline using **Faster R-CNN** lesion detection and **MediaPipe** facial landmarking to generate structured facial-region data for AI-assisted skin severity assessment.

Trendl | *Next.js, TypeScript, Supabase, Redis, Docker, AWS*

June 2026

- Built and deployed a daily web game where players identify Google Trends topics from historical search interest charts, reaching **200+** plays with recurring daily users in its first week.
- Architected a full-stack deployment using **PostgreSQL**, **Upstash Redis**, **Docker**, and **AWS ECS**, reducing benchmarked puzzle-fetch latency by **82%** through TTL-based caching.

PingPond | *Swift, SwiftUI, SpriteKit*

July 2026

- Developed and released a macOS menu bar application that visualizes live system activity as an interactive pixel-art aquarium, reaching **50+ downloads**.
- Implemented real-time process monitoring and an optimized SpriteKit simulation featuring **Reynolds boids** flocking, autonomous creature state machines, and a 30 FPS rendering loop with low idle CPU usage.

EXTRACURRICULAR AND LEADERSHIP

UBC Esports | *Software Development Executive*

June 2026 – Present

- Building and enhancing club infrastructure including the Gaming Lounge hub, portal, and scheduler used by **2,000+** students, and maintaining CI/CD pipelines with **Docker**, **GitHub Actions**, and **AWS**.

Motion UBC | *Next.js, React Native, PostgreSQL, Supabase, Firebase*

Oct 2025 – Apr 2026

- Developed a web and mobile platform using **Next.js**, **React Native**, **PostgreSQL**, **Supabase**, and **Firebase** to streamline driver scheduling and request tracking for **United We Can**, a Vancouver recycling nonprofit.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, Swift, C++, SQL, HTML/CSS, R

Developer Tools: Git, GitHub, VS Code, MongoDB, Postman, Supabase, AWS, Azure, Docker, Redis

Frameworks/Libraries: React, Next.js, React Native, Node.js, FastAPI, PyTorch, Flask, Playwright, Vitest, JUnit
